SAMPLE QUESTIONS

(For all Programs)

ENGLISH

➢ Read the passage and the questions that follow it. Choose the best answer for each question.

“While most desert animals will drink water if confronted with it, for many of them the opportunity never comes. Yet all living things must have water, or they will expire. The herbivores find it in desert plants. The carnivores slake their thirst with the flesh and blood of living prey. One of the most remarkable adjustments, however, has been made by the tiny kangaroo rat, who not only lives without drinking but also subsists on a diet of dry seeds containing about 5% free water. Like other animals, the kangaroo rat has the ability to manufacture water in its body by a metabolic conversion of carbohydrates. But it is notable for the parsimony with which it conserves its small supply by every possible means, expending only minuscule amounts in its excreta and through evaporation from its respiratory tract.”
